

INSTRUCTIONS FOR PREPARING A REPORT OF INSPECTION

FOR AN ONSITE WASTEWATER TREATMENT FACILITY

INSTRUCTIONS

Any person selling or transferring ownership of a property served by an onsite wastewater treatment facility (including a conventional septic tank system or and alternative onsite wastewater treatment facility) must retain a qualified Inspector to inspect the facility within six months prior to transferring ownership of the property (Arizona Administrative Code, A.A.C. R18-9-A316). See Figure 1.

An inspector that is qualified under A.A.C. R18-9-A316, must complete the attached *Report of Inspection* form, and provide it to the seller as required. If there is more than one onsite system in use on the property, the Inspector completes a *Report of Inspection* form for each system.

Before the transfer date (closing date) of the property, the seller provides the buyer with the completed *Report of Inspection* form and any other documents in their possession that relate to the permitting or operation and maintenance of the septic tanks

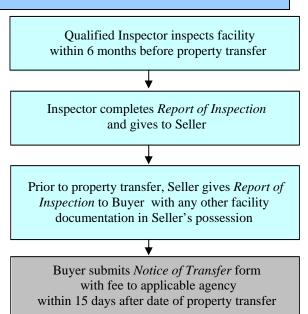

Figure 1. Flowchart of Notice of Transfer Process

systems or alternative onsite wastewater treatment facility. **DO NOT submit this** *Report of Inspection* form to ADEQ or the local county permitting agency. The Buyer retains this form after receiving it from the Seller.

Within 15 calendar days after the date of property transfer, the Buyer submits a complete *Notice of Transfer* form for the change of ownership, and files it with the applicable agency indicated in the *Notice of Transfer* instructions. Information from this *Report of Inspection* form is needed to fill out the Notice of Transfer that must be submitted by the Buyer. Effective Feb. 2, 2007, you can file your *Notice of Transfer* online. Visit the ADEQ website at https://static.azdeq.gov/forms/onsite_not.pdf for more information.

Qualified inspectors are required to completely and accurately fill out this form to the best of their knowledge. The form has been updated to include:

- Section 1 Facility Information
- Section 1 Facility Information
- Section 2 General Treatment and Disposal Works
- Section 3 Design Flow and Septic Tank Sizing

Section 4 — Septic Tank Inspection and Plumbing: Complete this section if the site is served by a conventional system (septic tank to leachfield - 4.02 general permit) or if the septic tank is used with an alternative system. Section 5 — Alternative System: Complete this section only if an alternative system is used at the site (4.03 - 4.22 general permit). This section can be combined with Section 4 if a septic tank is used.

PROPERTY TRANSFER INSPECTION FORM

Arizona Administrative Code R18-9-A303.B, -A304.A & C, -A309A, and -A316

Note: While this document is approved by ADEQ, it is intended to be used by contractors. ADEQ staff does not facilitate or perform property transfer inspections.

Summary of Inspection
Onsite Wastewater Treatment Facility Inspection Overview
Onsite Wastewater Treatment Facility Serves (check all that apply):
Residence/Dwelling Single family Multi- family/Shared Commercial
Other (Explain):
Type of Facility (check all that apply):
Conventional System Alternative System Gray Water System Observed
Number of Onsite Wastewater Systems on the property: Note: A separate Report of Inspection is required for each Onsite Wastewater System. Age of inspected Onsite Wastewater Treatment Facility: years If estimated, explain how it was determined:
Onsite Wastewater Treatment Facility
Septic Tank Condition: Operational Operational with concerns Not Operational (for details, see Sections 3 and 4)
Disposal Works Condition: Operational Operational with concerns Not Operational (for details, see Sections 4.1)
Alternative System - Onsite System Condition: Operational Operational with concerns Not Operational (for details, see Section 5)
Alternative Disposal Works Condition: Operational Operational with concerns Not Operational (for details, see Section 5.1)
For any operational concerns see page 7 in the comments section.
1. Facility Information
A) Domestic Water Source: Hauled Water Municipal System Private Water Company Shared Private Well Private Well
If a well is nearby, state the distance from Well to Wastewater System
B) Type of Wastewater Source: B) Type of Wastewater Source: Residential Commercial Other
C) Occupancy/Use: Full Time Seasonal/Part Time Vacant Unknown
2. General Treatment and Disposal Works
This system consists of the following systems and technology:
GP 4.02 Conventional Septic Tank/ Disposal System GP 4.05 Gravelless Trench Septic Tank GP 4.06 Natural Seal Evapotranspiration Bed Disposal Trench GP 4.07 Lined Evapotranspiration Bed Disposal Bed GP 4.08 Wisconsin Mound Disposal by Chamber Technology GP 4.09 Engineered Pad System Disposal by Seepage Pit GP 4.10 Intermittent Sand Filter
GP 4.03 Composting Toilet GP 4.11 Peat Filter GP 4.04 Pressure Distribution System GP 4.12 Textile Filter

DATE OF INSPECTION:

TAX PARCEL NO.

Initials of Inspector

GP 4.13 Denitrifying System Using Separated GP 4.20 Disinfect	ion Device
Wastewater Streams GP 4.21 Surface	Disposal
GP 4.14 Sewage Vault GP 4.22 Subsurfa	ce Drip Irrigation Disposal
GP 4.15 Aerobic System GP 4.23 Design f	low from 3,000 to less than 24,000 Gallons Per
GP 4.16 Nitrate-Reactive Media Filter Day (4.23 GP)	
GP 4.17 Cap System Is there a c	urrent Performance Assurance Plan?
GP 4.18 Constructed Wetland Yes	No
GP 4.19 Sand-Lined Trench	
3. Design Flow and Septic Tank Sizing	
A) Estimated Design Flow: gallons per day 🗌 Unknown	
B) Basis for design flow:	
Designated in permitting documents	
Calculated or estimated based on (check all that apply):	
Number of bedrooms for a dwelling:	
Fixture count for a dwelling:	
If not a dwelling: gallons per day	
C) Evaluation of actual flow versus the design flow (determined in 1A):	
 Actual flow did not appear to exceed design flow 	
Actual flow may exceed design flow	
D) Inspector Comments:	
4. Septic Tank Inspection and Pumping	
A) How many septic tanks are associated with this onsite wastewater treatment faci	lity? 1 2 or more
B) Septic tank liquid level measured before pumping (measured in inches from the b	oottom of the tank)
Primary (inlet) chamber: Scum thickness inches, Sludge thickness	
Secondary (outlet) chamber: Scum thickness inches, Sludge thicknes	ssinches
Liquid level not determined	
C) Was each septic tank or other wastewater treatment container on the property to the maximum extent possible, solid, floating, and liquid waste accumulations?	pumped or otherwise serviced to remove, Yes No
If yes, what is the name of the septic hauler company?	
License number issued by ADEQ:	
If no, select one of the following reasons pumping was not performed: A Discharge Authorization for the onsite wastewater treatment facility service within 12 months before the transfer of ownership inspection, Pumping or servicing was not necessary at the time of the inspection b and maintenance instructions, or No accumulation of floating or settled waste was present in the septic to the settled waste was present was present in the septic to the settled waste was present was presented was presented	was issued and the facility was put into ased on the manufacturer's written operation
 A Discharge Authorization for the onsite wastewater treatment facility service within 12 months before the transfer of ownership inspection, Pumping or servicing was not necessary at the time of the inspection b and maintenance instructions, or 	was issued and the facility was put into ased on the manufacturer's written operation
 A Discharge Authorization for the onsite wastewater treatment facility service within 12 months before the transfer of ownership inspection, Pumping or servicing was not necessary at the time of the inspection b and maintenance instructions, or No accumulation of floating or settled waste was present in the septic to the settled waste was present waste was present in the settled waste waste	was issued and the facility was put into ased on the manufacturer's written operation

DATE OF INSPECTION:

E) The Capacity of the septic tank is gallons, based on:
Capacity not determined (Explain): F) Septic tank material: Pre-cast concrete Fiberglass Plastic Steel Cast-in-place concrete Other (Describe):
G) Access openings in septic tank: One Two Three Other (Describe):
H) Septic tank lids & risers: Present Not Present If present, was the lid(s) securely fastened Yes No Note: Risers aide on-going system maintenance - minimum 20" diameter.
I) Number of compartments in septic tank: One Two Other (Describe):
J) Was there evidence of a compromised tank (infiltration) or (exfiltration) of the septic tank? Yes No
K) Was there evidence of a septic tank deficiency? (Check all applicable deficiencies observed. Describe extent and location in comment section) Root invasion Exposed rebar Cracks in tank Damaged inlet pipe Damaged lids or risers Damaged outlet pipe Other concerns describe in inspector comments
L) Baffle/sanitary "T" material: Pre-cast concrete Fiberglass Plastic Clay Could not be determined (explain in comments) Condition of baffles and sanitary "Ts": Inlet baffle or "T": Present Operational Not operational Not present Not determined
Outlet baffle or "T": 🗌 Present 🗌 Operational 🗌 Not operational 🗌 Not present 🗌 Not determined
Interior baffle: Present Operational Not operational Not present Not determined
M) Effluent filter (screen): Present Not Present Serviced Not serviced
Note: as of January 2001, effluent filters (screens) are required on all new septic tanks. Routine work recommended to maintain the facility (Some work may require a Construction Authorization from your local agency or ADEQ. Refer to A.A.C. R-18 A309 A.9.a and b and local codes as applicable).
Inspector comments, including all necessary routine work:
4.1. Disposal Works
Was the location of the disposal works determined?
Yes (see sketch on last page) No (explain why):
Disposal works please indicate type: Trench Bed Chamber Seepage pit Other:
Method of distribution Diversion valve Drop box Diversion valve Drop box Pressurized Unknown

	If inspection ports are present: i) Number of ports: ii) Indicate depth (in inches) of liquid in each port (point of reference would be grade): Port 1 Port 2 Port 3 Port 4 Port 5 Port 6 Port 7 Port 8
	s an operational (hydraulic load) test performed on the disposal works? Yes No s there evidence of a disposal works deficiency? Yes No (check all applicable deficiencies observed, describe as necessary in comment section). Crushed outlet pipe Root invasion High water lines in tank indicating previous backups D-box or valve not functioning properly Surfacing over disposal works or from inspection ports Unusually lush vegetation over disposal works Erosion over disposal works unusual settling Ponding water in the distribution media Animal intrusion Could Not Determine
W	re repairs or other maintenance recommended to disposal works as part of this inspection? Yes No Inspector Comments: Inspector Comments: I have inspected the physical and operational condition of the onsite wastewater treatment facility serving this property on the date indicated below. I have completed this Report of Inspection to the best of my knowledge, and have based the information contained in this form on observations and work performed at the time of inspection. However, this Report of Inspection does

not imply nor guarantee any future performance of this facility in any way. By signing this form, I hereby verify that I have completed an ADEQ approved course and that I have personally witnessed and conducted the inspection of this property.

5. Alternative System		
Alternative System should be evaluated by a qualifie sufficient knowledge or has been trained by the proc warranties.		
Qualified Inspector:		
Name of Manufacturer:		
Model/Capacity:		
Alternative System Information:		
Type of Treatment Equipment Present:		
Aerator is working properly? Yes N/A	No (explain ir	a comments)
System appears to have been properly maintained?	Yes	No (explain in comments)
Pump Systems Yes No		
Functionality:		
Is pump operating properly? Ye	s No	
High Level Alarm Works? Ye	s No	
Alarms and pumps on separate circuits? Ye	s No	
Is pump wiring protected? Ye	es No	
Both Audible and visual alarm present? Ye	es No	
Pump Cycle operating as designed? Ye	s No	
Is there a riser to grade with secure lid? Ye	es No	
Is tank watertight and structurally sound? Ye	es No	
Is there a Check Valve & Purge/Vent Hole Ye	es No	
Inspectors comments:		
5.1. Alternative System Disposal Works		
Was the location of the disposal works determined?		
Yes (see location on sketch found on page	ge)	
No Explain:		
Disposal works please indicate type:		
Trench Bed	Chamber	Seepage pit
Drip Low Pressure	Pipe	
Method of distribution		
Diversion valve Drop box	Distribution box	Manifold Serial loading
Pressurized Unknown	Other	
If other than operational, (Explain):		
i) Was the distribution component inspected		
 No (Explain):		
ii) Operational status of component: 🗌 O	perational 🗌 Oper	
What type of material is the supply line made of:	···· <i>J</i> ··	
PVC Orangeburg	🗌 Tile	🗌 Other

If inspection ports are present: i) Number of ports: ii) Indicate depth (in inches) of liquid in each port (point of reference would be grade): Port 1Port 2Port 3Port 4 Port 5Port 6Port 7Port 8 Was an operational (water loading) test performed on the disposal works? Yes No (Explain): Was there evidence of a disposal works deficiency? Yes No (check all applicable deficiencies observed, describe all in Comment section. Crushed outlet pipe Root invasion Bort over disposal works (soil treatment area) or from inspection ports Denot or valve not functioning properly Surface over disposal works (soil treatment area) or from inspection ports Denational (water loading) test failure Denational (water loading) test failure Denational (water loading) test failure Denational condition of the disposal works as part of this inspection? Yes No Physical and operational condition of the disposal works as part of this inspection? Yes No Physical and operational condition of the disposal works, at time of inspection, appeared to be: Operational outper construction Authorization from your local agency or ADEQ. Describe the process used and other inspector comments:	• •	present in disposal works? Present Not present

REQUIRED SKETCH OF ONSITE WASTEWATER TREATMENT FACILTY:

For reproducible results, show dimensions from structures that will not change, such as corners of the house. Triangulation may be used. Include measurements from property lines. All labeling must be legible. Show details, such as the road and North arrow, in relation to building corners to get the correct orientation. Show all located components. **An acceptable As Built or Record Drawing can be substituted**.
